Sustainable development

As the very first wind farm in Mongolia the proposed project will greatly assist the country in stimulating the commercialisation of grid-connected renewable energy technologies and markets. The proposed project will, therefore, help reduce GHG emissions versus the coal-dominated business-as-usual scenario. Furthermore, the project will improve air quality and local livelihoods and promote sustainable renewable energy industry development.

The specific goals of the project are to:

- generate electricity;
- help to stimulate the implementation of wind power in Mongolia;
- reduce greenhouse gas emissions in Mongolia compared to a business-as-usual scenario;
- create local employment opportunity during the assembly and installation of wind turbines, and for operation of the wind farm;
- reduce other pollutants resulting from the power generation industry, compared to a business-as-usual approach, such as SO2 and soot.
