

The project will contribute to the sustainable development of the area. Through this CDM project, Fatima Fertilizer will employ state-of-the-art N<sub>2</sub>O reduction and monitoring technology in order to reduce greenhouse gas emissions thus promoting sustainable development based on environmental and economic indicators. It will be directly measurable through the N<sub>2</sub>O emission reductions achieved due to the implementation of the project activity. Furthermore, Fatima Fertilizer will promote the concept of CDM which aims to spread state-of-the-art technologies to combat global climate change.
